

BBF Software

A critical area of the BBF's work is the development of software models, specifically the development of both data and information models that accelerate the implementation of agile services. This key area of work is led by BBF Software Architect [William Lupton](#), who also leads the Software Advisory Group.

The Forum's software activities span many areas and are stored for the membership on the Forum's [Bitbucket server](#) (*needs login*) and publicly on [Git Hub](#).
