# Open Broadband-UDP Speed Test (OB-UDPST)

The OB-UDPST (Open Broadband - User Datagram Protocol Speed Test) project will produce an open source implementation of a tool to perform the metrics defined in (soon-to-be) TR-471 IP Layer Capacity Metrics and Measurement.

Broadband Forum's Open Broadband initiative brings open source and open standards together, paving the way to dramatically change our industry and bring the full promise of broadband to fruition.

Visit the OB UDP Speed Test Home

Join the project:

Sign the Participation Agreement and submit via email attachment to Ken Ko, Broadband Forum Managing Director, at info [at] broadband-forum [dot] org:
