

Open Broadband - CloudCO App SDK (OB-CAS)

Introduction

This OB-CloudCO-App SDK project will define and develop in BBF an open platform software environment and associated software development kit (SDK) through which control/management software providers can easily hook in their cloud application running in the BBF CloudCO management environment. It will demonstrate BBF's Automated Intelligent Management (AIM) by plugging AIM modeling function apps containing only core application code, while leveraging common cloud/CloudCO infrastructure services via pre-defined open APIs.
